

BURLINGTON WORLDWIDE EXPANDS COCONA™ LINE

GREENSBORO, NC February 6, 2007– Burlington WorldWide announced today that Burlington Labs, Burlington WorldWide's technology incubator, has developed another activated carbon based product to its Cocona line!.... This time in wool.

The Cocona™ product line utilizes embedded activated carbon, derived from coconut shells, into the fiber and yarns. This new sustainable exclusive fabric combines the unique natural benefit of Cocona's odor, moisture and UV management with the stretch and breathability of wool.

"Our performance product line was the first to utilize this process as part of Burlington's ongoing sustainable initiative" said Pat Palmer, Executive Vice President. "The market's response has been overwhelming and generated further demand for other fabric applications.... As the industry leader, we had to be responsive." Palmer added: "This is only the beginning!"
